FROM CHAIRMAN DESK

I am very happy to know that Fabtech College of Pharmacy going to publish its Second Newsletter "Fabtech Pharma Newsletter" which reflects bimonthly updates of the academic, co-curricular activities and extracurricular activities of the staff and students of the college. In today's

world of globalization and competition, it has become necessary to bring reformation in the current education system that would empower the youth to be innovators and entrepreneurs. It is the need of the hour to bring the pool of knowledge to the rural areas and students studying in rural area in professional college become versatile for future development in choosing right carrier. With this aims at preparing the students as Pharmacists and making them aware of their rights and duties stipulated on moral issues based on pharmacy ethics and values. I wish you all the best for your efforts.

**Hon. Shri. Bhausaheb A. Rupnar
Chairman**

FROM PRINCIPAL DESK

It is my privilege to publish the Second copy of Fabtech Newsletter 2022. This year has been phenomenal in all the respects as well could add so many activities for the students and staff which were successfully completed and has brought the name to the department. The second copy published, will give the information related to academic, co-curricular activities carried out in last two months. The praiseworthy efforts taken by department in organizing various activities for all round development of students makes this department very unique. The consistent efforts of all the members of Editorial team need to be appreciated.

I wish you all happy reading.

**Prof. Dr. S.K. Bais
Principal**

Know the Pharmacist!

A **pharmacist**, also known as a chemist (Commonwealth English) or a druggist (North American and, archaically, Commonwealth English), is a health professional who specializes in the preparation, properties, effects, interactions and use of medicines. The pharmacist provides pharmaceutical care to patients, as well as basic primary health care services. Using knowledge of the mechanism of action of drugs, the pharmacist understands how they should be used to achieve maximum benefit, minimal side effects and to avoid drug interactions. Pharmacists undergo university or graduate-level education to understand the biochemical mechanisms and actions of drugs, drug uses, therapeutic roles, side effects, potential drug interactions, and monitoring parameters. This is mated to anatomy, physiology, and pathophysiology. Pharmacists interpret and communicate this specialized knowledge to patients, physicians, and other health care providers.

Among other licensing requirements, different countries require pharmacists to hold either a Bachelor of Pharmacy, Master of Pharmacy, or Doctor of Pharmacy degree.

The most common pharmacist positions are that of a community pharmacist (also referred to as a retail pharmacist, first-line pharmacist or dispensing chemist), or a hospital pharmacist, where they instruct and counsel on the proper use and adverse effects of medically prescribed drugs and medicines. In most countries, the profession is subject to professional regulation. Depending on the legal scope of practice, pharmacists may contribute to prescribing (also referred to as "pharmacist prescriber") and administering certain medications (e.g., immunizations) in some jurisdictions. Pharmacists may also practice in a variety of other settings, including industry, wholesaling, research, academia, formulary management, military, and government.

Roll of Pharmacist:

Pharmacists are often the first point-of-contact for patients with health inquiries. Thus, pharmacists have a significant role in assessing medication management in patients, and in referring patients to physicians. These roles may include, but are not limited to:

- Clinical medication management, including reviewing and monitoring of medication regimens.
- Assessment of patients with undiagnosed or diagnosed conditions, and ascertaining clinical medication management needs.
- Specialized monitoring of disease states, such as dosing drugs in kidney and liver failure.
- Compounding medicines.
- Providing pharmaceutical information.
- Providing patients with health monitoring and advice, including advice and treatment of common ailments and disease states.
- Supervising pharmacy technicians and other staff.
- Oversight of dispensing medicines on prescription.
- Provision of and counseling about non-prescription or over-the-counter drugs.
- Education and counseling for patients and other health care providers on optimal use of medicines (e.g., proper use, avoidance of overmedication).
- Referrals to other health professionals if necessary.
- Pharmacokinetic evaluation.
- Promoting public health by administering immunizations.
- Constructing drug formularies.
- Designing clinical trials for drug development.
- Working with federal, state, or local regulatory agencies to develop safe drug policies.
- Ensuring correctness of all medication labels including auxiliary labels.
- Member of interprofessional care team for critical care patients.

Fabtech Pharma Newsletter

Hon. Bhausaheb A. Rupnar Chairman **Hon. Ameet B. Rupnar** Managing Director **Hon. Dinesh B. Rupnar** Executive Director **Hon. Sanjay N. Adate** Campus Director

- Symptom assessment leading to medication provision and lifestyle advice for community-based health concerns (e.g. head colds, or smoking cessation).
- Staged dosing supply (e.g. opioid substitution therapy).

A man consulting with a pharmacist.....

Education and credentialing...

The role of pharmacy education, pharmacist licensing, and continuing education vary from country to country and between regions/localities within countries. In most countries, pharmacists must obtain a university degree at a pharmacy school or related institution, and/or satisfy other national/local credentialing requirements. In many contexts, students must first complete pre-professional (undergraduate) coursework, followed by about four years of professional academic studies to obtain a degree in pharmacy (such as Doctorate of Pharmacy). In the European Union, pharmacists are required to hold a Masters of Pharmacy, which allows them to practice in any other E.U. country, pending professional examinations and language tests in the country in which they want to practice. Pharmacists are educated in pharmacology, pharmacognosy, chemistry, organic chemistry, biochemistry, pharmaceutical chemistry, microbiology, pharmacy practice (including drug interactions, medicine monitoring, medication management), pharmaceuticals, pharmacy law, pathophysiology, physiology, anatomy,

pharmacokinetics, pharmacodynamics, drug delivery, pharmaceutical care, nephrology, hepatology, and compounding of medications. Additional curriculum may cover diagnosis with emphasis on laboratory tests, disease state management, therapeutics and prescribing (selecting the most appropriate medication for a given patient).

Types of Pharmacist:

- ✓ Academic pharmacist
- ✓ Clinical pharmacy specialist
- ✓ Community pharmacist
- ✓ Compounding pharmacist
- ✓ Consultant pharmacist
- ✓ Drug information pharmacist
- ✓ Home health pharmacist
- ✓ Hospital pharmacist
- ✓ Industrial pharmacist
- ✓ Informatics pharmacist
- ✓ Managed care pharmacist
- ✓ Military pharmacist
- ✓ Nuclear pharmacist
- ✓ Oncology pharmacist
- ✓ Regulatory-affairs pharmacist
- ✓ Veterinary pharmacist
- ✓ Pharmacist clinical pathologist
- ✓ Pharmacist clinical toxicologist
